SKILLS

Languages: Typescript, JavaScript, Python, SQL, C#

Frameworks: Angular, JasmineJS, Tailwind, ReactJS, NextJS, FastAPI, Bootstrap, NodeJS,

Technologies: NVM, Visual Studio Code, REST API, Git, Github, Responsive Design, Agile Methodology, Postman, Storybook, Figma, API Integration, Azure DevOps, Docker, AWS, AI Integration,

Databases: PostgreSQL, MySQL, SQLite

WORK EXPERIENCE

KBX Logistics, Green Bay, WI
Software Engineer

November 2022 - May 2026

- Led architecture, development, and maintenance of three Angular SPAs, refactoring legacy components into modular, maintainable design while driving cross-team adoption of coding standards, ESLint rules, and best practices.
- Improved application performance, readability, and scalability by reducing code complexity, eliminating deprecated patterns, implementing lazy loading, and increasing code modularization and reusability across features.
- Designed and implemented NgRx Signal Store state management patterns and developed 10+ responsive, cross-browser compatible features to ensure consistent, high-performance user experiences.
- Increased unit test coverage to 80%+ by redesigning test strategy and refactoring test suites, resulting in up to 90% faster test execution and significantly improved CI/CD pipeline efficiency.
- Designed and structured code according to NgRx Signal Store standards to enable consistent and high-performance state management
- Owned UI/UX consistency through UI audits and design standardization while validating frontend models against backend API contracts and conducting API smoke testing with Postman to reduce integration defects.

Capgemini, Houston, TX
Technical Consultant II

January 2022 - November 2022

- Designed and developed an application to replace the existing Quality Issue Management system, delivering new functionalities and features aligned with functional specifications and business requirements
- Implemented enhancements in line with defined business requirements to improve system capability and support quality issue management processes
- Demonstrated working knowledge of ABAP and Neptune by generating REST APIs, classes, and methods to support application functionality and integration
- Liaised with 6 offshore members, 4 ABAP developers, and 3 quality assurance testers to coordinate development and testing activities across teams

EDUCATION

The University of Houston
Bachelor of Science in Computer Information Systems
